# As Navy Expands Training in Washington, Some Residents Feel Left in the Wake

Is the public getting a fair say in Navy planning?

TO: STOP

FROM: (b) (6)

RE: (b) (6)

(b) (6) and COER friends,

Ironically, the Joint Threat Emitters are the least of our worries. The real dangers are the growler jets - each of which emit enough radiation to turn off every electric device in an entire city (or at least that is the plan). There is a video where they brag about their new found toy. See link below. These people are completely crazy! They make Dr. Strangelove seem like a friend of the family. Here are some quotes:

An electronic warfare super weapon called **Champ - Counter Intelligence High Powered Advanced Missile Program**. This electronic warfare super weapon, can knock out a country's entire electric grid! With no harm to structures. Made by Boeing and using High Powered Microwave Pulse radiation, the Navy will certainly be looking to get in some target practice with this. **"We took out everything..."** boasted one Navy tester. During the test, the CHAMP missile emitted bursts of high-powered energy, turning off all computers and electrical appliances in its path - just like a power outage only without the power outage. **"This technology marks a new era in modern-day warfare,"** said Keith Coleman, CHAMP program manager for Boeing Phantom Works. **"In the near future, this technology may be used to render an enemy's electronic and data systems useless even before the first troops or aircraft arrive."**

Friends,

This thing is identical to the monster the Navy has been testing at Pacific Beach. Grumman has a weapons website where they describe this monster in detail. It can broadcast and receive on nearly any frequency and at nearly any strength. It is hundreds and perhaps thousands of times more harmful than a cell tower. If you see one of these things operating in a Forest Service road pullout, when you are out in the Olympic Mountains, start moving away from it as quickly as possible. Note that there is a fixed and mobile version. The picture is of a mobile version with its generator truck attached.

Regards,

(b) (6)

Development of the Joint Threat Emitter, or JTE, began in 1997-1998 and the concept for this new emitter "was envisioned to be a portable, high fidelity, fully reactive surface-to-air weapon simulator," said Master Sgt. Joseph Moloney, 266th Range Squadron joint threat emitter unit work center supervisor.

"There are two versions of the C2U, a mobile and a fixed configuration. The fixed configuration would be located in a Range Control Center or a location with access to radar feeds and positional data," said Sergeant Moloney. "The first C2U delivered to Mountain Home with the prototype system will be a mobile unit, built in its own trailer."

Another piece is the Threat Emitter Unit --- the "business" end of the system.
